PROFILE

Software Engineer and former venture-backed founder with 5+ years of experience building and shipping products across full-stack development, blockchain infrastructure, mobile applications and game development. Co-founded and led a Web3 gaming studio, securing $250K+ in grants, hackathon prizes and venture funding, leading a remote team of up to 16, and shipping business-to-consumer products across Solana, Eclipse, Monad and Celo. Hands-on experience in smart contract development, TypeScript, React, Unity and on-chain systems, with a track record of taking products from concept to launch. Open-source contributor to the Solana Unity SDK, combining technical execution, product ownership and team leadership to deliver software across emerging technologies.

EXPERIENCE

Co-Founder, CEO & CTO · IntoTheVerse Inc.

Sep 2021 – 2026

Co-founded IntoTheVerse, a Web3 game studio selected for Celo Camp Batch 4 (top 6 of 30 startups). Raised funding from Flori Ventures and angel investors, incorporated in Delaware in January 2022, and led product and engineering with a remote team of up to 16. We shipped games on Solana, Eclipse, Monad, Aptos, Algorand and Celo, from hypercasual and time-management games to an open-world metaverse, survival shooters and RPGs.

- Launched **Cryptara Conquest**, a survival shooter RPG, in the browser on Eclipse mainnet in Jan 2025. In its first 6 weeks: **13K+ unique players**, 65K+ game sessions, 500K+ collectibles minted, 2M+ transactions and **$80K in revenue**.
- Brought Cryptara Conquest to Android through the Solana dApp Store for Seeker in June 2026: 1,000+ players, 13,000+ hours played, 367K+ on-chain transactions and 2,000+ game items minted.
- Shipped **Sushi Nads**, a time-management cooking game on Monad, live at sushinads.fun.
- Took **Intrant Inferis** to Solana Breakpoint 2023 in Amsterdam, with a pre-alpha demo and live community playtests. View on X
- Raised **$250K+ in equity-free funding** from 15+ international hackathon wins and grants (Superteam India, Solana, Celo, Aptos, Algorand, ETHGlobal).
- Hired the team and ran its engineering workflow.

Founder & Engineer · Terrace (solo)

Apr 2026 – present

A football prediction app for friends. You post a take in a match chat, Terrace AI turns it into a bet your mates can back or fade, and there are 1v1 challenges, parlays, private leagues and one-minute matchday picks on top.

- Built and shipped it on my own as a mobile PWA and browser app on Monad testnet, now in public beta at play.terrace.social.
- First 2 weeks of public beta (Oct 2026): **340+ markets** created from fan chat, 1,650+ on-chain transactions and 7 private leagues.

Open-Source Contributor · MagicBlock Solana.Unity-SDK

Mar – Jun 2026

- 4 merged PRs, ranking **4th among contributors** in the repository's history. Together they bring the Solana Mobile Stack, originally built for React Native, natively into Unity; each fixed a problem I hit while shipping Cryptara Conquest. View on X
- Fixed Mobile Wallet Adapter 2.0 signing for Seeker Seed Vault wallets by adding CAIP-2 chain identifiers, kept MWA 1.x working, and added tests.
- Added `.skr` domain resolution, so players can send in-game assets to a readable name instead of a wallet address.
- Sped up Solana program lookups, and upgraded Web3Auth to v9, which fixed social login across the SDK.

Developer Expert & Community Advocate · Chainlink

2022 – present

- Ran hands-on workshops on smart contracts, oracles, Chainlink VRF and blockchain gaming at BITS Pilani Goa, IIT Goa, Goa College of Engineering and Padre Conceição College of Engineering, and spoke at developer meetups about building on secure oracles.

Technical Moderator (Part-time) · Celo Foundation

2022 – 2023

- Moderated a 15K+ member developer community on Discord and the forums: answered questions on validators, wallets, local nodes and smart contracts, and helped teams during hackathons.

Blockchain & Full-Stack Engineer (Freelance) · Footium

Sep – Nov 2021

- Wrote smart contract tests for an Ethereum football management game on Arbitrum, covering matchmaking, game logic, player trading and stadium purchases, and worked on the TypeScript backend for game events as an early contributor.

React Native Developer (Freelance Intern) · Vidrona Ltd, UK

Mar – May 2021

- Built React Native dashboards that visualise IoT device data for energy-efficiency monitoring and asset management.

PROJECTS

Cryptara Conquest Solana & Eclipse

Fully on-chain survival shooter RPG built with Unity and Rust/Anchor, using MagicBlock Ephemeral Rollups for real-time gameplay on Solana. Shipped on Eclipse mainnet and on Android through the Solana dApp Store for Seeker.

Tech: Unity (C#), Rust/Anchor, MagicBlock ER, session keys, VRF, Metaplex Core, Solana Mobile Stack, TypeScript, Azure, GCP App Engine

- Led Unity client engineering and game design, and connected the client to the TypeScript backends and on-chain programs behind the marketplace, inventory, partner activations and boosts, with real-time game-state sync.
- Added session keys across 15 Anchor instructions, including fee payments for Ephemeral Rollup transactions, so players don't have to approve every action in their wallet.
- Reworked the program's scoring and economy: leaderboard scores no longer drop on damage or death, difficulty and boss rewards scale with depth, progression after level 4 is paid, and revivals are priced in SOL or tokens. Also wrote a permissionless player-account migration, VRF spawn retries and a devnet/mainnet upgrade runbook.
- Fixed a mainnet data-corruption bug that affected **94% of legacy session accounts**. Added a layout-aware migration with plausibility checks, then restored 5 corrupted leaderboard entries on-chain.
- Formally verified the program's safety rules with 100+ theorems covering revival limits, session locking, level gating and treasury protections.
- Built a revenue dashboard for on-chain revenue and treasury activity, with daily aggregation and caching to keep RPC load down. View dashboard
- Won **1st place ($26K)** in the games track at Solana Speedrun Game Jam 2023, with grant support from the Metaplex Foundation.

Terrace Monad · MCP server · npm

Built solo: friends turn matchday opinions into markets, 1v1 challenges, parlays and private leagues, with on-chain reputation and a social graph.

Tech: Solidity, Foundry, Chainlink CRE, Envio HyperIndex, Next.js, TypeScript, viem, Cloudflare Workers, WebAuthn, Azure Table Storage, Node.js, MCP SDK, zod

- Wrote the Solidity contracts, tested them with Foundry and deployed them to Monad testnet, with three Chainlink CRE workflows: settling markets from live match data, AI judging of open-ended predictions, and TEE-sealed league picks.
- Kept the wallet out of the player's way with passkey-derived keys, session transactions and automatic gas top-ups. An AI step turns a plain-English take into a structured market that can be settled.

- Wrote the Next.js app with TypeScript and viem, indexing with Envio HyperIndex, fixtures and odds from API-Football, and Claude and Gemini for creating markets.
- Added the services around it: Cloudflare Workers for push notifications and AI market checks, a Telegram wallet-linking bot, AI pundit and market-making agents, Web Push and a MetaMask Agent Wallet plugin.
- Published **terrace-mcp** on npm (MIT, GitHub), an MCP server that lets two people's AI assistants bet each other: one Claude turns a take into a 1v1 challenge and shares a link, the other accepts, and Chainlink settles it on Monad from official match data. One install line, no wallet, sign-up or app. Works in Claude Code, Claude Desktop and Cursor · demos on X: 1 · 2

Outcome: Public beta on Monad testnet at play.terrace.social · View demo on X

Sushi Nads Monad

Overcooked-style cooking game in the browser: log in with a social account, mint a Chef NFT and cook against the clock, with every delivery recorded and scored on-chain.

Tech: Unity (C#), Privy, Solidity, Hardhat, OpenZeppelin, Node.js, Express, ethers, Firestore, Azure, Next.js, TypeScript

- Wrote the contracts: a Chef NFT with an energy system and USDC refills, a game contract that scores each run on-chain from deliveries, cooking quality, combos and efficiency, and a seasonal leaderboard. Tested with Hardhat and deployed on Monad and Base testnets.
- Wrote a gasless Node.js/Express backend. A relayer signs and pays for every player transaction through a nonce-safe queue, with Privy embedded-wallet sponsorship, Firestore caching, session heartbeats, RPC retries and rate limiting. Deployed it on Azure App Service.
- Built the Unity web3 layer: API client, chef minting and energy, a session lifecycle that recovers from crashes, and an event tracker that queues gameplay events and flushes them on-chain before a session ends.
- Made the Next.js website: landing page, live Top Chefs leaderboard and the embedded WebGL build.

Outcome: Live at sushinads.fun, with contracts on Monad testnet.

Alpha Streams Solana & Base

AI crypto research assistant built on Dark Research's open-source Mallory app. You ask a research question, it pulls on-chain data and Nansen analytics, and you pay per answer with x402 on Solana.

Tech: React Native, Expo, TypeScript, Gemini AI SDK, x402, Nansen APIs, Supabase, Corbits Proxy, Chainlink CRE, Solidity, Foundry, Base

- Used Gemini to interpret each research request and filter on-chain data into the insights that answer it, enriched with Nansen wallet and market analytics.
- Added x402 payments through Corbits Proxy, so each research result is paid for on Solana when it's delivered.
- Fixed Google sign-in upstream; the fix was merged into the original project.
- Took the idea to Base as BlockStory for Chainlink Convergence 2026: pay-per-request on-chain analytics where AI plans each query, x402 charges per request and Chainlink CRE attests every result on Base testnet (GitHub · demo).

Outcome: Built for the Solana x402 Hackathon · View demo on X · GitHub repository

MetaMeadow Boomtown Celo

Unity town-building and exploration game on Celo, where caring for in-game trees retires real carbon credits.

Tech: Unity, C#, Solidity, Hardhat, OpenZeppelin, thirdweb SDK, ERC-721A, Toucan Protocol (TCO2), Uniswap V3, Celo

- Built the in-game marketplace with thirdweb, using social-login wallets and paymaster-sponsored gas so players don't pay for gas, and added token swaps through the Uniswap V3 router on Celo.
- Linked in-game actions, such as nurturing trees, to retiring on-chain carbon credits through Toucan Protocol.
- Fixed the vulnerabilities found in the initial contract audits.

Outcome: Celo Foundation grant through Prezenti (2024); deployed on Celo testnet · Smart contracts on GitHub

Intrant Inferis Solana · Android

PvE on-chain, story-based dungeon action exploration RPG built for mobile on Solana.

Tech: Unity, Solana Unity SDK, Anchor, SOAR, Web3Auth, cNFTs (Underdog, GameShift), Node.js/TypeScript/Express, Firebase, MongoDB, Google Cloud

- Built the game backend, including webhooks that listen for GameShift events (revival-potion mints, player upgrades, inventory changes) and update the game client in real time.
- Used compressed NFTs for in-game assets to cut minting costs for players, and GameShift APIs for gasless transactions.
- Won **1st place ($25K)** in the games track at the Solana Bonkathon, organised by Radiants DAO.

Outcome: Pre-alpha demo at Solana Breakpoint 2023; mainnet launch with BONK rewards in June 2024 · View demo on X

DAOInsure Polygon

DAO-run crop insurance with streamed premiums and claims decided by member vote, using a Chainlink weather oracle I built.

Tech: Solidity, Superfluid, Chainlink (custom external adapter), IPFS, React, Polygon

Outcome: Chainlink, Filecoin and Superfluid prizes, ETHIndia ETHOdyssey 2021.

LightningCELO Celo

Payment streaming on Celo: send cUSD salaries and subscriptions by the second, and create, withdraw from or cancel streams.

Tech: Solidity (Sablier), Next.js, TypeScript, wagmi, ethers, Chakra UI

Outcome: Built for EthCC 2022 and deployed on Celo's Alfajores testnet · GitHub · View demo on YouTube

SKILLS

LANGUAGES	TypeScript, Solidity, Rust, C#, Python, Move (Aptos, Movement, Sui), Cadence (Flow), C++ (basic)
WEB, MOBILE & AI	React, Next.js, React Native, Node.js, CSS, WebSockets, WebRTC, Pub/Sub APIs, ML, AI agents & LLM APIs (Anthropic Console, Google AI Studio)
SMART CONTRACTS	Foundry, Hardhat, Anchor, Chainlink CRE
SOLANA	MagicBlock Ephemeral Rollups, VRF, session keys, Metaplex (cNFTs, Core, pNFTs), Solana Mobile Stack, Helius, Arcium MPC
GAMES	Unity, Phaser 3
WALLETS & PAYMENTS	Privy, thirdweb, wagmi, viem, x402, Superfluid, Sablier, Razorpay API
DATA, CLOUD & BACKEND	Envio, The Graph, Alchemy, IPFS & Filecoin, Nansen API, Azure, GCP, Cloudflare Workers, Firebase, MongoDB, Supabase, GitHub Actions

EDUCATION

B.Tech, Computer Science and Engineering
Vellore Institute of Technology · CGPA 8.84 · 2018 – 2022

LANGUAGES

Professional: English, Hindi, Konkani (native)
Basic: Portuguese, German, Spanish

LEADERSHIP & ADVOCACY

Superteam India, Member 2023 – present
Chainlink Developer Advocate 2021 – present
Chainlink Developer Expert 2026 – present
Web Projects Lead, ACM-VIT Board 2018 – 21

FELLOWSHIPS & AWARDS

Gitcoin Kernel Fellow 2022
SolanaU Web3 Accelerator 2022
Celo Camp Batch 4, top 6 of 30 2021
Celo India Fellowship 2021
Protocol Labs Developer Grants 2021
Facebook SparkAR Scholarship 2020
